New Advanced
Molecular Taggent Technology

The Offender Marker spray system deploys a highly visible forensic linking criminals to crime scenes.

- The spray is the first accredited system for marking criminals at the scene, enabling them to be identified later and forensically proving that they were present at the time of the offence.
- Each canister contains a unique Molecular Taggent Technology which when deployed marks criminals with a bright red indelible molecular taggent code. This provides individual, secure, registered evidence to the police in the event of a serious crime being committed.
- It also leads to a reduction in crime through the genuine deterrent of gaining convictions in court.

So how does the Offender Marker work?

Marks criminals with a highly visible red dye.

The ultra-violet element becomes stronger as the dye fades and washes out.

Highlight via a special RedWeb UV torch.

The unique registered molecular taggent code in the can be analysed and compared to the Offender Marker database.

Solid evidence to gain a conviction.
